

It seems that you want to run two commands with one keyboard shortcut in Visual Studio Code. One command is to send a sequence of text to the terminal, and the other is to toggle the terminal visibility. According to the web search results, you can achieve this by using a macro extension or the built-in `runCommands` command. Here are some possible solutions:

- You can install the multi-command extension and define a sequence of commands in your `settings.json` file. For example:

```
"multiCommand.commands": [
  {
    "command": "multiCommand.sendSequenceAndToggleTerminal",
    "sequence": [
      {
        "command": "workbench.action.terminal.sendSequence",
        "args": {
          "text": "pandoc ${file} -o ${fileBasenameNoExtension}.pdf\n"
        }
      },
      "workbench.action.terminal.toggleTerminal"
    ]
  }
]
```

Then you can assign a keybinding to this command in your `keybindings.json` file. For example:

```
{
  "key": "ctrl+shift+a",
  "command": "extension.multiCommand.execute",
  "args": {
    "command": "multiCommand.sendSequenceAndToggleTerminal"
  },
  "when": "editorLangId == 'markdown'"
}
```

- You can use the `runCommands` command that is available in Visual Studio Code version 1.77 or later. This command allows you to run a sequence of commands with optional arguments. For example, you can add this keybinding to your `keybindings.json` file:

```
{
  "key": "ctrl+shift+a",
  "command": "runCommands",
  "args": {
    "commands": [
      {
        "command": "workbench.action.terminal.sendSequence",
        "args": {
```

```

        "text": "pandoc ${file} -o ${fileBasenameNoExtension}.pdf\n"
      },
      "workbench.action.terminal.toggleTerminal"
    ]
  },
  "when": "editorLangId == 'markdown'"
}

```

For more information, you can refer to the documentation of the `runCommands` command or the Stack Overflow questions that discuss similar scenarios. I hope this helps you with your task.
