Watch these three videos:

- 1. CSS Variables And Trainings
- 2. How To Use CSS Variables (Custom Properties)
- 3. An introduction to CSS custom properties

var () can have a callback value that returns a custom property value and the callback itself can be another custom propertyA value with a callback.

```
.fallback {
    --color-text: white;

background-color: var(--undeclared-property, black);

color: var(--undeclared-again, var(--color-text, yellow));
}
```

This scope includes the selector the custom property was declared for as well as any descendants of that selector
