Form Validation

Mohamed Emary

November 4, 2023

- ***First read all code snippets in* [lesson page](#)*.***

- Form validation is also covered in this [video](#) in the [playlist](#) we talked about in the last lesson.

Assignment Articles I Didn't Read

I may return to these articles later.

- Read and follow along to [MDN's Client-Side Form Validation Guide](#)

  - Skip the section on "Validating forms using JavaScript". This will be covered in a future lesson.

- Go through SitePoint's [Complete Guide to HTML Forms and Constraint Validation Guide](#). You can skip the section on "JavaScript and the Constraint Validation API" and "Creating a Custom Form Validator".

- Read Silo Creativo's article [Improving UX in forms](#).

Some notes

We can target form controls that have passed or failed validations using the `:valid` and `:invalid` pseudo-classes.
